# What's after DCIS – The Static DC and the Cloud as Targets

Elevator Pitch

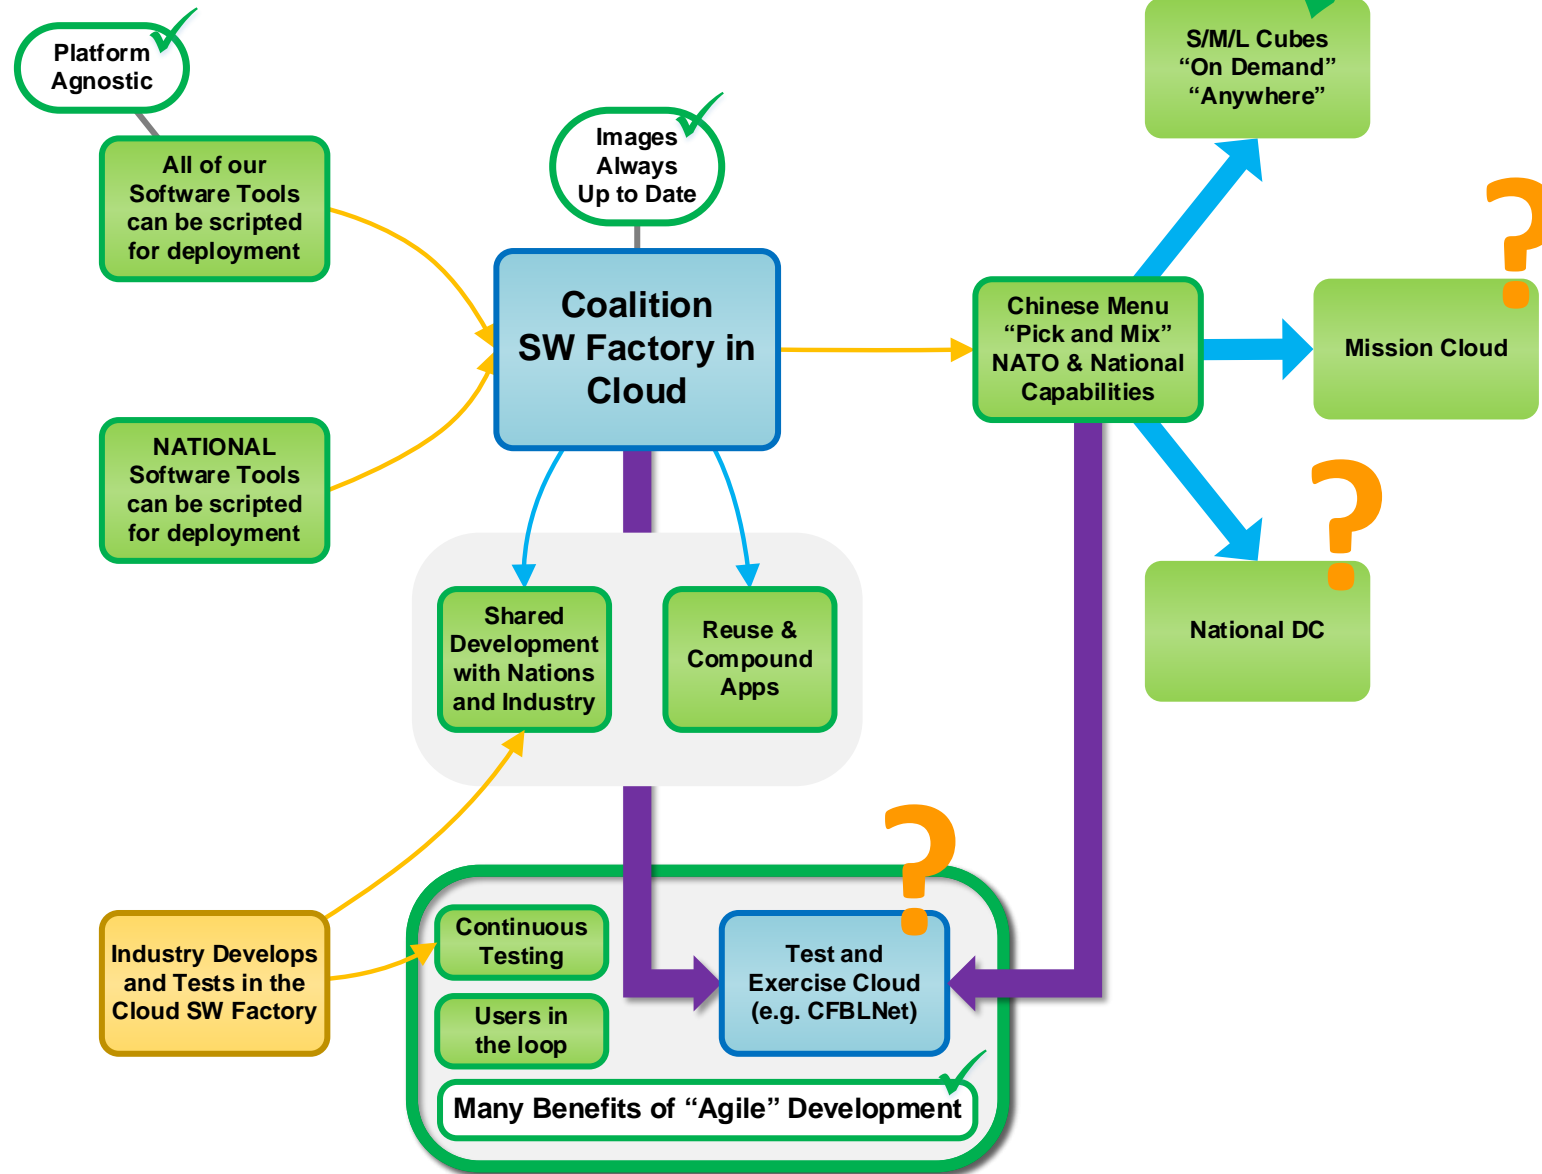

# Ambition

***“Deploy any mix, to anything,  
anywhere, in hours”***

***“Consume data and capability resiliently,  
locally or remotely, as needed”***

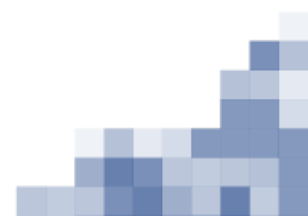

# In context of the larger vision...

# Elevator Pitch (1/2)

- **DCIS addresses the Deployable environment.**
- **But the same services and applications are also relevant:**
  - In a static data centre environment;
  - In a cloud environment (private, hybrid, or public).
- **If we want to go to “continuous testing” and “user in the loop” development:**
  - We have the need to deploy ensembles of applications and data to various environments (DC, cloud...)

# Elevator Pitch (2/2)

## The future capabilities and targets:

### 1. Conventional DC target

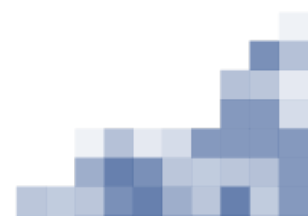

- Bundles to be configurable and deployable.

### 2. Cloud target

- Bundles to be configurable and deployable to a cloud (private or public).

### 3. (Cloud) Test and Exercise target

- Bundles of applications, data sets and scripts to be configurable, deployable and recoverable (storable).

# Discussion!
